

The American Heart Association Digital Resuscitation Portfolio

The American Heart Association digital resuscitation portfolio is the preferred solution to uniquely and efficiently deliver safe and effective CPR quality improvement.

Our digital programs - deeply rooted in the latest science - lead healthcare organizations on an immediate journey to high-quality and verified CPR competence to maximize lifesaving outcomes.

The time for digital is now.

The AHA digital resuscitation portfolio includes AHA's HeartCode®, HeartCode Complete, and Resuscitation Quality Improvement® (RQI®) programs for basic (BLS), advanced (ACLS/ALS), and pediatric (PALS) healthcare education and quality improvement. We are committed to accessibility in all digital content and work to ensure our programs meet the accessibility criteria of WCAG 2.1 (Level AA).
