# RQI Analytics – Understand. Focus. Improve.

You Asked. We Listened.

RQI Partners is excited to announce the release of a major upgrade to RQI Analytics.
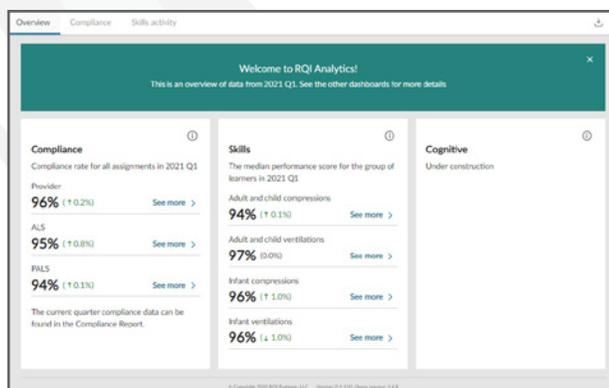

This release will replace the existing analytics application and is targeted to first be released to all RQI 2025 accounts. Over the following months, RQI Analytics will be enhanced to provide insights for our entire digital portfolio, including HeartCode® 2025, RQI for Teams, and RQI *for* NRP®.

RQI Analytics examines compliance and skill performance from RQI 2025 program participants and presents historical data that can be analyzed, visualized, and discovered to communicate meaningful patterns and trends in performance.

The Power of Performance Data and Trends

The integrated RQI Analytics application allows administrators to view and analyze aggregate data at the organization, institution, department, job type, or learner levels. Focused on detailed performance of skills, RQI Analytics displays data in a combination of ways including visual models, charts, lists, and through exporting raw data. The compliance section identifies a total learner count for those who have or have not completed their quarterly requirements and shows historical compliance trends and behavior. RQI Analytics is intended to be used in association with reporting available on RQI 1Stop to visualize your organizations' skill performance data.

- To make the data manageable, RQI Analytics displays historical data that refreshes on the first day of each calendar quarter.

- Accessed through the RQI 1Stop administrator portal, RQI Analytics users will see an overview page that summarizes the previous quarters' activity as well as historical performance.

- Current quarter compliance and completion data is available though RQI 1Stop or your 3rd party LMS reports.
